

NEO

PREMIUM POLYMER GLOSS SEALANT

NEO is a unique and very high class polymer gloss sealant for almost every exterior automotive surface. **NEO** provides an outstanding resistance to atmospheric conditions especially on unpainted surfaces like vinyl or glass. Thanks to a highly innovative polymer formula, treated surfaces will have a semi-gloss and sealed finish which will last for many months.

NEO is free of hydrocarbons and silicone oils and can therefore be used in bodyshops without causing any problems.

After applying **NEO**, greasy, smeary and cheap-looking glossy surfaces are a thing of the past! Additionally, **NEO** can be used on all smooth surface materials found around the home e.g. glass, ceramic, etc.

NEO gives great coverage. Apply it sparingly as 'less is more', making it very cost effective! If you are seeing lots of residue on the surface after application, you are applying too much. Remove any residue with a soft polishing cloth that won't mar painted surfaces.

APPLICATION BY HAND:

*Before applying the **NEO** gloss sealant to your vehicle's exterior, make sure it is clean and free of contamination. As such, we recommend a car wash or at least a washing procedure by hand. Afterwards the surfaces can be sealed using the following steps (**NEO** can be applied to wet surfaces, therefore there is no need to dry prior to application).*

1. Unpainted plastics, vinyl, rubber & engine compartment

- Just spray on **NEO**, apply evenly over the surface and leave for approximately 10 minutes – that's it, job done!
- In case of extremely weathered plastics, we recommend that you repeat this procedure several times.
- Surrounding surfaces (e.g. paint) can also be sealed in a single step. Alternatively, if you prefer, just wipe the **NEO** haze off the surface using the Red MicroPLUS Cloth (see Points 2, 3 & 4 also).

Explanation:

Plastics, rubber, and vinyl surfaces are very similar to human skin - they all feature a permeable structure. To ensure that **NEO** creates a lasting and consistent gloss, please let it remain for some time on the surfaces to be sealed.

Our recommendation:

*Should you apply too much **NEO** on a surface, just use our Honey **NEO** Spider Hand Puck to distribute any excess liquid gently, in order to avoid any drips or wastage.*

2. *Paint, alloyed rims, chrome*

- Just spray on **NEO** and apply it with the handy Honey **NEO** Spider Hand Puck in circular movements over the surface.
- After a short drying period, wipe off any residue using our Grey MicroPLUS microfibre cloth – that's it!

3. *Glass surfaces, exterior*

- There is no need to clean the surface before application.
- To apply **NEO**, spray on the glass and surrounding surfaces like the window frame and rubber composition. Afterwards, distribute the liquid using low pressure with the Honey **NEO** Spider Hand Puck. Next, wipe off the residue from the treated surfaces using our Red MicroPLUS Cloth.
- When applying **NEO** on glass, it doesn't matter if the application puck is polluted due to previous surface applications. Your windows will be extremely clean and film-free regardless.
- The quality of **NEO** will be revealed when it rains. The water will instantly form little beads and run off your windows. The best way to convince yourself regarding the quality of our sealant is to leave one little section of your window untreated – the comparison will clearly demonstrate the effect.
- Once applied, **NEO** remains on the treated surfaces for several months (please note, heavy use of windscreen wipers on windscreens could result in diminished durability within the affected area).

4. *Glass surfaces, interior*

Interior application is very different to that of the exterior application described in Point 3. We DO NOT advise using the spray nozzle to apply **NEO** inside the vehicle.

- Spray **NEO** directly onto the Honey **NEO** Spider Hand Puck and apply it to the inside of your windows.
- Please make sure that you avoid spraying **NEO** on surfaces (dashboard, door coverings, etc.) which you don't want to seal. Especially try to prevent having a soaking wet and dripping **NEO** Hand Puck inside the car.
- In the event of unintentionally spraying **NEO** on other surfaces, please wipe it off immediately using our Red MicroPLUS Cloth in combination with our ICE Glass Cleaner.

Our recommendation:

For interior car care purposes, we recommend that you use our non-permanent lasting interior cleaner PURPLE. This product also leaves a semi-gloss effect on dashboards, door coverings, etc.

APPLYING BY MACHINE :

In comparison to conventional car care products, **NEO** is also suitable for time-saving mechanical applications. We recommend this way of working especially when using **NEO** for industrial application purposes.

- When using **NEO** with a polishing machine, please apply it to the surface by spraying. Then use the **NEO** [excenter] orbital polishing machine together with the Honey **NEO** Spider Pad and start polishing using a medium speed gear.
- After polishing, remove any residue with our Grey MicroPLUS Cloth or, for glass surfaces, our Red MicroPLUS Cloth.

Our recommendation:

Feel free to use an [excenter] orbital polishing machine (it doesn't matter which cam it provides) with a Velcro-covered backing plate. Please do not use conventional foam pads for machine application. Foam pads without a spider perforation are often too dense or too soft and therefore not suitable for providing a deep and consistent gloss! By using an unsuitable foam, you may have to invest even more time to correct the finish afterwards.

RECOMMENDATION:

Regarding the universal sealing and caring performance, **NEO** is suitable for application on nearly every automotive exterior surface. As a result, it provides time and money-saving benefits when taking care of your vehicle.

The 6-in-1 NEO advantage!

1. Plastic, vinyl and rubber care
2. Paint sealant
3. Glass cleaner
4. Glass sealant
5. Alloyed rim sealant
6. Chrome care products

We assure you that despite the wide range of specified applications, NEO will keep its quality promise!

In comparison to conventional sealing products (see Points 1-6), NEO will fulfil the highest expectations on all surfaces. You will not suffer from any performance loss relating to handling, gloss performance, durability or sealing effect – far from it!

ACCESSORIES - ORIGINAL NEO SPIDER-PADS

The original **NEO** Spider Pads are characterized by their maximum durability. After use, just use water to clean and wash them out thoroughly to ensure all **NEO** residues are removed from the foam pad.

WARNING:
